Waitlist Match: one page for Marc

What it does, what it reads, where it runs and what it costs

What it does

When a client cancels late, it shows Tanya up to 3 people from the waitlist who can take that slot and still want it, or "nobody". It flags people who should come off the list. Tanya offers the slot to one person at a time, so two people can never say yes to the same table.

The facts

Question	Answer
What does it read?	The typed waitlist and the Kneadly booking export, saved in one folder on the desk computer.
Where does it run?	Only on the desk computer. It does not use the internet. Its window only works on that computer.
What does it keep?	The waitlist, a log of openings and names shown, and offers marked by Tanya. All in the clinic's Data folder.
What does it send?	Nothing. No texts and no emails. No AI service sees client information.
Health information	Never shown on screen and never put in a message. It stays in the clinic's own folder.
Cost	$0 a month.
Upkeep	About an hour a month: Julie saves the weekly export; Tanya crosses off flagged names.
Therapists' say	Each therapist can be set to approve short-notice new clients first. Off until each one decides.
How do we know it works?	On four weeks of the clinic's own openings, it gave a right answer for all 44 (Tanya's own judgement) and never a wrong name. A monthly results page shows openings, refills and empty time.

What needs your approval next (all off today)

Step	What you switch on	Cost	What it adds
1	Daily report in the Kneadly owner account	$0	Overnight cancellations fill in by themselves; a short call list of tomorrow's likely no-shows; bookings checked daily
2	Second reminder text, inside Kneadly	$0 if your plan has it	Fewer morning confirmation calls
3	Text offers, one person at a time	About $3-12 a month	Offers reach people faster. Off switch and a log of every message. Needs text consent and slot holds.
4	Kneadly Direct (optional)	Higher Kneadly plan (about $45 a month more, not yet checked)	No files to save by hand

Recommendation: use the program as it is for a month and read the monthly results page. Then decide on step 1.
